

## **GLOSS LAMINATE**

Gloss Laminate makes your custom labels extremely smooth and allows them to reflect a lot of light, which is why it gives a shiny coat on your labels.

Because it does reflect a lot of light, this coating reproduces vibrant color and delivers sharper detail due to higher contrast wherein are darker and highlights are brighter.

[www.dgpanxin.en.alibaba.com](http://www.dgpanxin.en.alibaba.com)**MATTE LAMINATE**

Matte laminate dulls down your custom labels, for a flat , non-shiny label finish.

Colors are duller or “flat”, with less contrast. Matte coating is forgiving with low-resolution prints and provides for a refined appearance. Your labels develop with printed colors that are soft and muted.

## **HOLOGRAPHIC GLOSS LAMINATE**

Holographic gloss laminate may look barefaced at certain angles, but once this stunning coating catches light, a transparent rainbow prism appears on the surface of your labels as they are tilted.

Because it is still a type of gloss laminate, it behaves like a gloss coating. It reflects a lot of light and gives vibrant color, plus delivers sharper detail due.
